

## Operation on Sets

There are some operations which when performed on two sets give rise to another set. Here we will define certain operations on set and examine their properties.

### 1) Union of sets

The union of **A** and **B** is the set of all those elements which belong to either in **A** or in **B** or in both. It is denoted by **A $\cup$ B** and read as **A union B**. The symbol ' $\cup$ ' is used to denote the union.

**Example:**

$A = \{1, 2, 3\}$ ,  $B = \{3, 4, 5\}$  therefore  $A \cup B = \{1, 2, 3, 4, 5\}$

Ven diagram of  $A \cup B$ : -

Shaded Portion in Orange is  $A \cup B$

**Some of properties of union of sets: -**

- a)  $A \cup B = B \cup A$  (**Commutative law**)
- b)  $A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$  (**Associative law**)
- c)  $A \cup \phi = A$  (**Identity law**)
- d)  $A \cup A = A$  (**Idempotent law**)
- e)  $A \cup U = U$  (**law of Universal set**)

**Q1)** Find the union of each of the following pairs of sets.

i.  $A = \{a, e, i, o, u\}$ ,  $B = \{a, c, d\}$

**Ans:**  $A \cup B = \{a, e, i, o, u, c, d\}$

ii.  $A = \{1, 3, 5\}$ ,  $B = \{2, 4, 6\}$

**Ans:**  $A \cup B = \{1, 2, 3, 4, 5, 6\}$

iii.  $A = \{x : x \text{ is a natural number and } 1 < x \leq 5\}$

$B = \{x : x \text{ is a natural number and } 5 < x \leq 10\}$

**Ans:**  $A = \{2, 3, 4, 5\}$ ,  $B = \{6, 7, 8, 9, 10\}$ ,  $A \cup B = \{2, 3, 4, 5, 6, 7, 8, 9, 10\}$

## 2) Intersection of sets

The intersection of **A** and **B** is the set of all those elements which are common in **A** and **B**. It is denoted by  $A \cap B$  and read as **A intersection B**. The symbol ' $\cap$ ' is used to denote the intersection.

**Example:**

$A = \{1, 3, 5, 7\}$ ,  $B = \{1, 5\}$  therefore  $A \cap B = \{1, 5\}$

Ven diagram of  $A \cap B$ : -

**Some properties of Intersections of Sets: -**

- a)  $A \cap B = B \cap A$  (**Commutative law**)
- b)  $A \cap (B \cap C) = (A \cap B) \cap C$  (**Associative law**)
- c)  $\phi \cap A = \phi$  (**law of empty set**)
- d)  $U \cap A = A$  (**law of universal set**)
- e)  $A \cap A = A$  (**Idempotent law**)
- f)  $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$  (**Distributive law**)
- $A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$

**Q2)** Find the intersection of each of the following pairs of sets.

- i. If  $A = \{1, 3, 5, 7, 9\}$  and  $B = \{2, 3, 6, 8, 9\}$  then find  $A \cap B$   
**Ans:**  $A \cap B = \{3, 9\}$
- ii. If  $A = \{e, f, g\}$  and  $B = \phi$  then find  $A \cap B$   
**Ans:**  $A \cap B = \phi$
- iii. If  $A = \{x : x = 3n, n \in \mathbb{Z}\}$  and  $B = \{x : x = 4n, n \in \mathbb{Z}\}$  then find  $A \cap B$   
**Ans:**  $A = \{3, 6, 9, 12, 15\}$  and  $B = \{4, 8, 12, 16\}$  therefore  $A \cap B = \{12\}$

### 3) Difference of sets

The difference of set **A** and **B** is represented as: -

$$\mathbf{A-B} = \{x : x \in A \text{ and } x \notin B\}$$

Conversely,  $\mathbf{B-A} = \{x : x \in B \text{ and } x \notin A\}$

Ven diagram of  $\mathbf{A-B}$  and  $\mathbf{B-A}$  given are below: -
